The Circular Design Surface

Thanks to its cutting edge technology and 20 years of Research & Development, Sustonable brings to your home the only truly sustainable composite stone material, mixing a unique combination of natural stone and recycled PET plastic.

We have succeeded in offering a more ecological surface that never compromises the quality expected from Sustonable Circular Design Surface.

100% recyclable, free of hazardous chemicals, unlimited design options, and high tech qualities make Sustonable surfaces the best choice for creating authentic eco-conscious spaces.

Due to our rigorous manufacturing method, all of our slabs are carefully produced to maintain the same detail and quality. Hence, Sustonable is a versatile product; it can be used for kitchen countertops, bathroom wall panels, vanity tops, backsplashes, worktops, tabletops, and bars. It perfectly fits any project that needs to be perdurable, resistant, elegant, and mindful of the environment.

We hope you enjoy Sustonable Circular Design Surface and feel proud of contributing to cleaning up our oceans of plastic waste. We are pleased to say that we recycle 100 PET plastic bottles per m² of Sustonable surface created.

Thank you for collaborating in keeping the Earth clean and healthy.

The Sustonable Team

MAINTENANCE AND CARE

EASY CARE FOR A BETTER LIVING

Sustorable is very easy to maintain thanks to its hardness and zero porosity. To keep its natural appearance, just clean your **Sustorable** surface with regular soap and warm water and then rinse it with water.

Please find the following quick tips and precautions to preserve your **Sustorable** surface like the first day.

REGULAR STAINS AND REMAINS

Rub the stain with a cloth dampened with a neutral soap or cleaner. (sauces, food, juice, drinks...). For the remains, moisture the residue with warm water and regular soap, damp for some minutes, and remove the debris with a plastic spatula. Clean with water. (food, fruit and vegetables, soft drinks, sauces, basic cosmetics, gum, makeup, and nail polish).

Wine, coffee, tea, ketchup, or other similar organic stains considered problematic in any household, can be easily cleaned with water and a melamine sponge. Just scrub in circles where the stain is and rinse it with water..

GREASE STAINS

Use a neutral soap mixed with warm water, rub the stain with a cloth in a circular motion, and rinse it with clean water.

LIMESCALE

Pour vinegar or use non-abrasive cleaners specified for cleaning lime. Apply on to the surface and leave it to work for one minute, then rinse with water.

SILICONE TRACES

Apply a solvent such as ethanol and allow it to moisture. After a few minutes, scrape the surface with a plastic spatula to remove the silicone rests.

ANY QUESTIONS ?

If you have any more questions, we will be delighted to help you, please contact us at:

PRECAUTIONS AND RECOMMENDATIONS

We recommend you to follow these precautions and suggestions to keep your **Sustainable** surface spotless.

OUTDOORS

Do not place Sustainable materials outdoors or at any place where it could be exposed to extreme sunlight or UV output.

CAREFUL WITH IMPACTS

Take care to do not impact Sustainable surface heavily. We are tough, but please place kitchen cookware or any other utensils with gentleness to avoid damage.

HEAT

Sustainable Circular Design Surface is a high heat resistant product. Still, please do not place hot objects directly (saucepans, pots, kettles) to avoid irreversible deterioration as an immediate temperature change from hot to cold could damage the surface. Please use a mat instead to place these objects.

SEALER APPLICATIONS

We do not recommend the use of sealants as Sustainable engineered stone does not need this kind of treatment (unlike marble). These products could affect the shine past the years and leave some areas brighter than others.

USE OF SHARP UTENSILS

Sustainable Circular Design Surface is 50% stronger than other composite stone materials; however, we recommend that for better maintenance, avoid cutting ontop of the surface with knives or sharp tools and use a chopping table, preferably.

CHEMICALS OR CLEANERS NOT RECOMMENDED

Please do not use caustic soda, degreasing, very acidic products like ammonia, chlorine-based, oven cleaners, toilet, furniture waxes, oil soaps, acetone, and products to unclog. Do not use under any circumstances products containing hydrofluoric acid or dichloromethane.

Sustainable recommends to use cleaning products between pH 5 to pH 9, as products outside this scale may degrade the surface.

REPOLISHMENT

Sustainable Circular Design Surface should not be repolished by any circumstance.
